

Missouri Traffic Crashes

**2005
Edition**

**2004
Statistics**

**Department of Public Safety
Missouri State Highway Patrol**

Introduction

This booklet is published by the Missouri State Highway Patrol as an aid to persons who are interested in the traffic accident problem in Missouri. It contains information which provides for a comprehensive look at the Statewide accident problems as experienced in 2004.

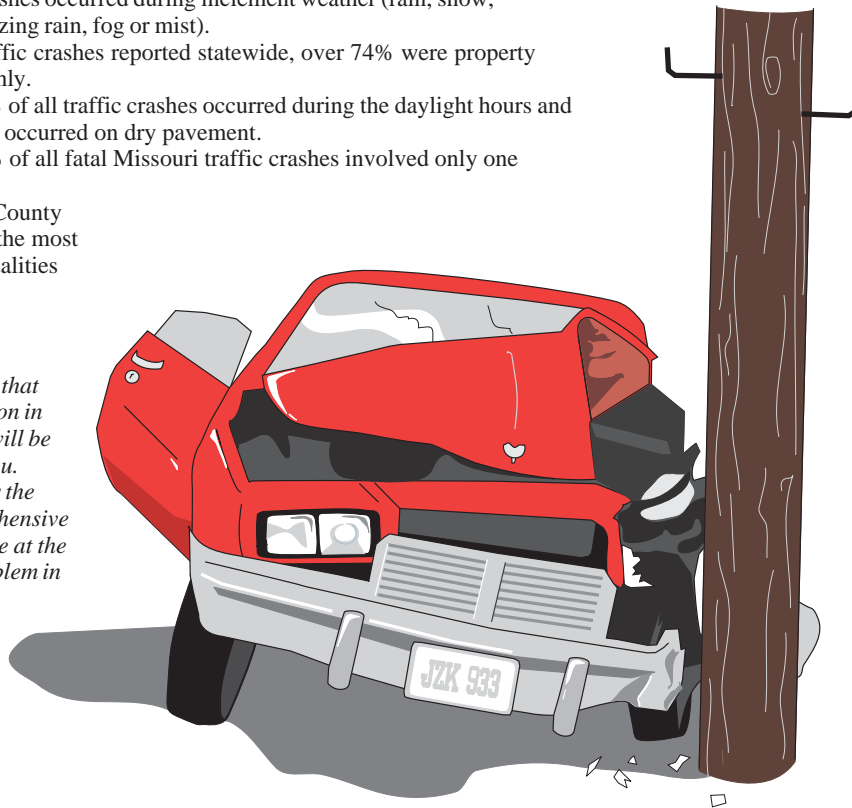

The Missouri State Highway Patrol is the central traffic accident data collection agency for the State of Missouri. Data on both rural and urban traffic crashes is made available to this agency. Law enforcement agencies throughout the State provide the Highway Patrol with copies of their accident reports. All reports of traffic accidents including those investigated by the Missouri State Highway Patrol are tabulated and analyzed by this agency. It is thus due, in part, to the continued cooperation of these law enforcement agencies that a meaningful picture of the statewide accident experience is available to interested persons.

Interesting Statistics

Here at a glance are some interesting statistics found in this booklet:

- In 2004 there were 1,130 persons killed in traffic accidents in the State of Missouri, 102 (8%) less than in 2003. There was a decrease (.2%) in total accidents statewide compared to 2003.
- Speed and too fast for conditions were the lead Probable Contributing Circumstances in fatal accidents. About 11% of all fatal accidents involve drinking/drugs.
- About 45% (504) of all persons killed in Missouri traffic crashes in 2004 were in the 16-35 age group. The age group most overrepresented in Missouri fatal traffic crashes is 16-20 (186 killed - 16% of the total).
- It is interesting to note that in known cases only about 11% of all traffic crashes occurred during inclement weather (rain, snow, sleet, freezing rain, fog or mist).
- Of all traffic crashes reported statewide, over 74% were property damage only.
- Over 72% of all traffic crashes occurred during the daylight hours and over 75% occurred on dry pavement.
- Over 56% of all fatal Missouri traffic crashes involved only one vehicle.
- Jackson County recorded the most traffic fatalities with 77.

It is hoped that the information in this booklet will be of value to you. Certainly it is the most comprehensive look available at the accident problem in Missouri.

*Updated 1996 Licensed Drivers 3,797,574

¹ Number of deaths per 100 million miles of vehicle travel.
² Number of deaths and injuries per 100 million miles of vehicle travel.
³ The 1995 cost figures have been calculated using a different National Safety Council cost estimate formula. The 1993 and 1994 cost figures also have been recomputed using this formula. As a result, the 1993 and 1994 costs displayed in this publication are different than those previously published. 1993 - 1995 costs are not comparable to prior years since different cost formulas were utilized.

Note: The type of accident is determined by the first harmful event.

Statewide Traffic Deaths by County

Statewide Traffic Deaths by County - The numbers on this map include both rural and urban traffic deaths for each county and the City of St. Louis. The City of St. Louis is carried separately because it is not located within a county.

The first figure in each county represents the total deaths during 2004. The second figure (the figure with the decimal point) represents the average deaths per year for the last ten years. By removing the decimal point, the number represents the total deaths for a 10-year period. The third figure indicates the increase or decrease of traffic fatalities in each county from the year 2003 to 2004. If there is no change it will be indicated by a -0-.

For example: Atchison, the topmost, western county, shows 4 people were killed last year. There has been an average of 2.6 people killed each year for the last 10 years or a total of 26 over the 10-year period.

Drinking and Accidents (Includes drivers of all vehicles and pedestrians) - Whether or not a person has been drinking cannot always be determined at the scene of an accident. It is generally impossible to determine the persons who have had one or a few drinks; yet, these individuals may be as much of a hazard as the obvious drunk. Because of the time lapse from the moment of occurrence until an officer arrives at the scene to make the investigation, a person's condition concerning drinking can change a great deal. In cases where the individual may have been removed to a hospital, doctor's office or funeral home, his condition may never be determined.

Persons Killed in Alcohol Related Accidents 252
Persons Injured in Alcohol Related Accidents 5,451

Fatal Traffic Crashes:

Drinking Involved 218
No Drinking Involved 778
Information Not Known 10

All Traffic Crashes:

Drinking Involved 8,301
No Drinking Involved 167,461
Information Not Known 6,481

In Known Cases:

- 4.7 out of every 100 traffic crashes in the State involved drinking.
- In rural accidents, 7.3 out of every 100 traffic accidents involved drinking.
- 21.8 out of every 100 fatal accidents involved drinking.
